

MASTERPLAST - PERSONAL CHANGE

The MASTERPLAST Public Limited Company ("Company") informed the shareholders that Mr. László Piry's employment relationship as Chief Executive Officer has been terminated by mutual agreement on 31st July 2018. From 1st August 2018 the Chief Executive Officer of the Company shall be the present Chief Financial Officer Mr. Róbert Nádasi.

Mr. László Piry joined the company at the beginning of 2017. A new operating structure has been introduced by the founders. The working method of the management was renewed, the new CEO was responsible for operational management and the founders are involved in strategic work. On the one hand this gave a new impetus to the Company. A new business line has started, which reduces the exposure of the construction industry and creates new market opportunities. The packaging industry, the non-construction related fiberglass mesh applications, and car industry are the market segments where the Company sees further growth potential.

On the other hand the external economic and industrial environment has a significant effect on the production and sale of the insulation and other construction materials which is the main activity of the Masterplast. While the sale of the constructional and accessories product is mainly in relation with the new buildings market, the insulation related materials mostly depends on the building reconstruction and the home improvement market. The Company experienced a positive trend over the past period in the development of the construction industry environment of its country portfolio on certain markets. Thanks to this, the Company's result has been growing steadily.

A change in the Company at the head does not affect the Company's operating structure and role of the founding owners. The stock price rose by 27% in the past one and half year, and breaking the upward trend is unlikely. The news has no effect on the share price.

Methodology used for equity valuation and recommendation of covered companies

The discounted cash flow valuation is a method of valuing a company (or project, assets, business, etc.) with the time value of the money. The model forecasts the company's free cash flow (free cash flow to firm) and discounts it with the average cost of capital (WACC). The cash flow is simply the cash that is generated by a business and which can be distributed to investors. The free cash flow represents economic value, while accounting metric like net earning doesn't. The WACC represents the required rate of return by the investors. If a business is risky the required rate of return, the WACC will be higher.

Discounted cash flow model (DCF): We analyze the companies using five year forecast period and set a terminal value based on the entity's long term growth or on different exit multiples like EV/EBITDA or EV/EBIT. In certain cases the forecast period may differ from five years. In this case the analysts must define the reason for difference. The cash flows are discounted by the company's WACC unless otherwise specified.

In the first step we have to forecast the company's cash flow. The free cash flow to firm (FCFF) is based on the earnings before interest and taxes (EBIT), the tax rate, depreciation and amortization (D&A), net change in working capital (which is based on the current assets and current liabilities) and the capital expenditures (CAPEX). The model requires a terminal value which can be based on the long term growth or on an exit multiple like EV/EBITDA, or EV/EBIT. Forecasting the terminal value is a crucial point because in most cases it makes up more than 50% of the net present value.

The discount rate (WACC): The average cost of capital of the company is dependent on the industry, the risk free rate, tax, the cost of debt and the equity risk premium. The cost of equity is calculated by the CAPM model, where the independent variables are the risk free rate, the industry specific levered beta, and the equity risk premium. The WACC is dependent on the capital structure, so the forecast of the equity/debt mix is crucial.

At the end we get the enterprise value (EV). The EV is the market capitalization plus the total debt and preferred equity and minority interest, minus the company's cash. In the last step we have to reduce the EV with the net debt. This figures divided by the shares outstanding we arrive at the target share price.

The discounted cash flow model includes sensitivity analysis which takes the effects of the change in the WACC, the long term growth or the used exit multiples on which the terminal value is based.

Our target price is based on a 12 month basis, ex-dividend unless stated otherwise.

Peer group valuation: For comparison we use peer group valuation. The analysis based on important indicators and multiples like P/E, EV/EBITDA, EV/EBIT, market capitalization, P/S, EBITDA margin, net debt to EBITDA, EBITDA growth, dividend yield and ROIC. If the industry justifies we may use other multiples. The peer group is compiled according to the companies' main business, with respect to the region (DM or EM market).

Recommendations

- Overweight: A rating of overweight means the stock's return is expected to be above the average return of the overall industry, or the index benchmark over the next 12 months.
- Underweight: A rating of underweight means the stock's return is expected to be below the average return of the overall industry, or the index benchmark over the next 12 months.
- Equal-weight: A rating of equal-weight means the stock's return is expected to be in line with the average return of the overall industry, or the index benchmark over the next 12 months.
- Buy: total return is expected to exceed 10% in the next 12 months.
- Neutral: Total return is expected to be in the range of -10 +10% In the next 12 months.
- Sell: Total return is expected to be below -10% in the next 12 months.
- Under revision: If new information comes to light, which is expected to change the valuation significantly.

Change from the prior research

Our first research was published on 15 December 2017. In that Initial Coverage our price target was HUF 775, but the changes in fundamental factors justified the update of our model. Our new price target is HUF 789 which is higher by 3% than our first price target.
